

## **SURFACTANT COMPOSITION HAVING STABLE HYDROPHILIC CHARACTER**

### **Abstract of the Disclosure**

5           Hydrophilic surfactant compositions are disclosed that include a surfactant  
component and a stabilizer component. The surfactant can be coated on a surface by  
depositing a surfactant solution on at least a portion of the surface, then drying the  
surfactant solution to form the dry coating. The surfactant compositions, when applied  
to a substrate, can provide a hydrophilic surface that retains its hydrophilic character  
10 over time, at elevated temperatures, or both.
